

Using the **pit bull** Rear Axle Sliders for the Honda Grom Revised September 2024

Pit Bull Rear Axle Sliders will be installed by replacing your factory axle washers (on both sides) with our sliders. The slider base thickness is exactly the same as the factory washer.

The design of these sliders will permit use of Pit Bull Trailer Restraint Pins without having to remove the slider pucks. They will also not interfere with the use of a rear stand.

If you crash and the slider puck gets deformed enough to require removal in order to use our TRS to get your bike home, remove the plastic portion and continue using the steel base to ensure safe transport of the motorcycle. Replace damaged sliders as needed.

Using the **pit bull** Front Axle Sliders for the Honda Grom Revised September 2024

Pit Bull Front Axle Sliders will be installed by removing the front axle and installing both bases with the flat side down (arrows up).

The design of these sliders will permit use of Pit Bull Hybrid Forklift Front stand. It may work with other front stand brands but has not been tested.

If you crash and the sliders get damaged (as they should), we recommend replacing the sliders. Any use beyond the first crash event may not provide full protection for your motorcycle.
